Personal Applications

CryptoWatcher/ Cryptocurrency watch list March 2021

Technologies: React, Javascript, JSX, HTML5, CSS3

- Deployed a Cryptocurrency watchlist that displayed the top 10 cryptocurrencies.
- Integrated CoinGecko API to get cryptocurrency information and update the currencies prices.
- Utilized React as the framework of my project.
- Programmed CryptoWatcher with Javascript, JSX and HTML to display API information and structure the watchlist.
- Designed CryptoWatcher with CSS and CSS Modules.

Experience

Coding Temple / Software Developer January 2021 - Present, Brooklyn, NY

Technologies: HTML5, CSS3, Javascript, ReactJS, Bootstrap, RESTful API, Flask, Python, PostgreSQL

- Crafted a weather app widget using the Open Weather Map API, CSS, vanilla javascript and AJAX to update the location, temperature, and weather description for the user's city of interest.
- Optimized previous law firm website by converting it into a React application.
- Collaborated with my team to create a law firm website using HTML and CSS.
- Developed Flask applications, using Bootstrap, Python, and PostgreSQL.
- Built an E-commerce site using Flask.
